Expense Tracker - UI/UX Case Study

Project Overview

The Expense Tracker app is a mobile application designed to help users manage their finances efficiently by tracking income, expenses, and savings in real-time.

My goal for this project was to create a minimal, intuitive, and visually engaging interface that simplifies personal finance management for users of all ages

Problem Statement

Many people find it challenging to track and analyze their spending habits. Existing expense tracker apps often suffer from:

- Overwhelming interfaces
- Poor categorization of expenses
- Limited visualization of financial data
- Lack of motivation to consistently log expenses

Objective:

Design an app that encourages regular use, provides clear insights into spending patterns, and makes financial tracking simple and rewarding.

Target Audience

- Age group: 18-45 years
- Tech Comfort Level: Beginner to intermediate
- User Type:
  - Students managing pocket money
  - Working professionals budgeting salaries
  - Small business owners tracking daily transactions

Design Goals

- Minimal & Clean Layout for quick reading
- Instant Overview Cards for total income, total expense, and balance
- Recent Transactions List for easy tracking
- Expense Summary Chart for visual understanding
- One-click access to Add Transaction

UI Decisions

- Summary Cards:

Green for income

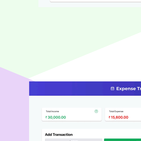
Red for expenses

- Transactions List: Icon indicators for expense/income with amount color coding
- Pie Chart & Histogram: Quick breakdown of expense categories
- Consistent Padding & White Space: Enhances readability

Wireframing

Low-Fidelity Wireframes:

- Created in Figma to test layout ideas before visual design
- Focused on information hierarchy and ease of navigation



Landing Page

The dashboard displays total income, total expenses, and remaining balance at a glance. Users can easily add, edit, or delete income and expense entries. All transactions are listed clearly, complemented by visual charts for quick and intuitive financial analysis.

Add transactions

Add income or expense along with price date and category

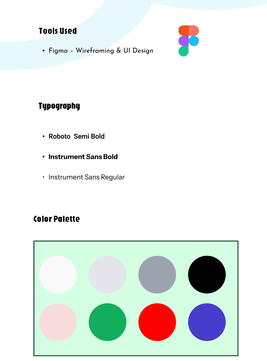
Filter

User Flow

Steps:

1. Onboarding → Set Monthly Budget
2. Add Expense/Income → Categorize → Save
3. View Dashboard → Analyze Spending

UI Screens



Tools Used

- Figma - Wireframing & UI Design

Typography

- Roboto Semi Bold
- **Instrument Sans Bold**
- Instrument Sans Regular

Color Palette

Learnings

- Minimal design boosts user retention
- Data visualization is crucial for user engagement
